

# How To Run Multiple Instances of One App on Your Android

BY RISHABH JAIN - JUNE, 15TH 2014

In case you are an Android user, there's no point telling you the degree of customization an Android device can handle. While we have covered the most popular Android [whatsapp tricks like creating fake last seen](#) and [how to create fake Facebook chats](#) in this article we move to a much more niche need. In this article we cover how to run multiple instances of one app on Android, a topic which we have already covered for jailbroken iPhone. For jailbroken iPhone you can simply use [social duplicator to run multiple instances of whatsapp](#), Facebook, Instagram and other popular social media platforms.

Some or the other day, you must have wondered about running multiple instance of one app on your Android device if you wanted to sign in to two facebook, twitter or Instagram accounts at the same time. Officially it's not possible, but as mentioned above, active developers are smart enough to bring upon any customization you want on your device. Today, at [SwapMyApp](#), we are covering small guide that can help you to run multiple instances of on app on your Android with ease:

Before we begin, you need:

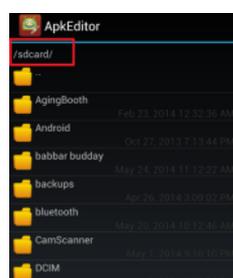

- An Android device running any version.
- [Apk Editor](#) and [Apk Editor Patch](#) available on your Android (Don't install any app unless and until we mention to do so).

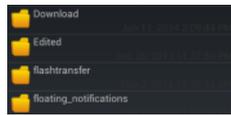

## Run Multiple Instances of One App On Android

**Note:** If you are following this guide to run Multiple WhatsApp account on your Android by cloning WhatsApp app, this guide is not for you. You might get successful in cloning WhatsApp but due to security features of WhatsApp "Verification failed" error will pop up. Instead you can follow this guide on [How To Run two WhatsApp On One Phone](#).

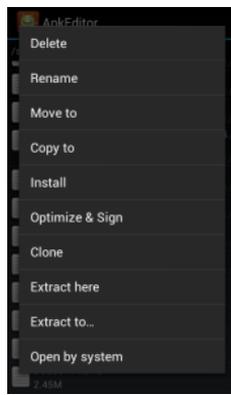

For Instagram, Facebook Messenger, Tomcat, Viber, Line or any other app, this guide works flawlessly.

- Done with downloading **Apk Editor** and **Apk editor Patch**? If yes, please **Install Apk Editor** on your Android.
- Please open the Apk editor app and make sure seen directory is **/sd card/**.

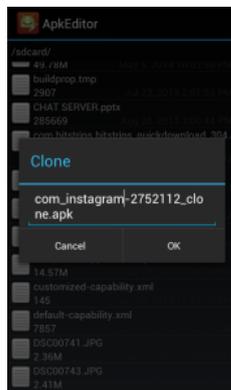

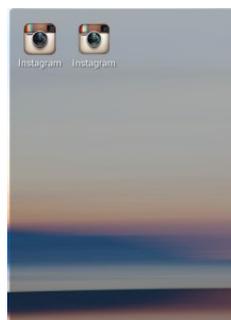

- Now **Install Apk Editor Patch**, this will ask you to replace previous installed app. Grant access to it.
- Foremost thing, you need to get apk for the app you wish to clone on your Android. If you are unfamiliar with the apk download procedure, please follow [this guide to Download apk on your Android](#). Transfer the downloaded apk file from PC to your Android via USB cable. For reference, I am taking **Instagram** to clone on my device.
- Now open **Apk editor** File Manager app and locate the apk you transferred to your device in the previous step. **Long press the apk** and from the pop up **Select “Clone”**. Press **Ok**.

- Now, **Change the name** of the apk. Name it whatever you wish and Press **Ok**.

- Now open your regular File manager app and locate the cloned app. Install it as you install any other app.
- Voila, we are done. Now you can run multiple instances of one app on your droid.
